Developer of greenhouse gas emission reductions and clean energy projects

Camco is a global developer of emission reductions and clean energy projects with operations in China, USA, UK, Africa, Russia and South East Asia. Camco has a 20 year track record in project development, technical delivery and policy development; working with local industry, multinational companies, governments and regulatory bodies.

Whether you are looking to reduce your energy consumption, manage your greenhouse gas emissions, qualify for emission reduction certification, or acquire technical and regulatory advice; we use our expertise and global networks to help you achieve your business objectives.

Creating a cleaner economy

Carbon project development

We have created one of the largest emission reduction portfolios and have structured ground-breaking and innovative arrangements for the sale and delivery of emission reductions to compliance and voluntary buyers.

Clean energy project development and investment

We collaborate with industry, project developers, equipment providers and investor groups to create emissions-to-energy projects and maximise sustainable energy production across a range of industries.

Energy and carbon advisory

Camco's energy and Carbon Advisory teams provide strategic, commercial and technical expertise accrued over two decades to deliver low carbon energy and sustainable development solutions.

20 years experience in technical delivery

Working with Camco

● Are you looking to reduce the carbon emissions output of your business?

Camco works with companies around the world to identify and implement projects that significantly reduce carbon emissions. With a world-class reputation for technical delivery and structuring financial returns, our teams are on the ground to guide a project through the many policy and regulation frameworks to realise its emission reduction potential.

● Are you looking to invest in or develop clean energy?

We are becoming more involved in the development and delivery of clean energy projects in the US, China and Southeast Asia. We are working with investors to create successful clean energy projects currently specialising in waste heat recovery, industrial energy efficiency, agricultural methane, biomass, municipal solid waste and coal mine technologies.

● Are you interested in purchasing voluntary or commercial carbon credits?

Recognised as being one of the best carbon project developers in the world for the delivery of quality carbon credits, we have an award-winning reputation for structuring tailored solutions and can help you with your requirements.

● Do you require expertise and advice on climate change related issues in your industry?

With over two decades of operations, Camco can offer you a unique combination of skills and experience translating into successful low carbon energy and sustainable development solutions. Having worked with small businesses as well as governments and multi-national companies around the world, our expertise is diverse and we are ready to help you tackle your climate change issues.

An award-winning business

Generating waste heat into power in China's cement industry

Client: Anhui Conch Cement Company Ltd

Camco is working with Anhui Conch, the largest cement producer in China, on a programme of energy efficiency projects at multiple Conch production facilities. The projects all use Japanese advanced high efficiency waste heat recovery technology, never before commercially financed in China, and utilise the waste heat for onsite power generation.

The projects all capture waste heat from the cement making process that was previously vented into the atmosphere. It is utilised to produce power in onsite power plants ranging in size from 8 to 47 MW. Once fully installed, the Conch series will collectively deliver greenhouse gas emission reductions equal to 3.3 million tCO₂e per annum through displacing power that would otherwise be taken from the local grid that is dominated by coal fired power.

This project is a major step towards improving China's industrial efficiency. It illustrates how carbon financing can be used to make energy efficiency projects economically viable, and shows how large producers can leverage their scale to achieve large aggregated emission reductions across their portfolio.

"Camco's end-to-end project development model provides the right platform for good cooperation and as an environmentally friendly company, we are energetically working with Camco to meet the Government's policy and high standards on environmental protection, energy saving and carbon reduction."
